Note: We have updated our project proposal with respect to the feedback from Assignment 1 such that now, upon typing in a message, the tweet will include a GIF from GIPHY API based on the message along with the original option to translate their message.

GETTING AND POSTING TWEET

As a logged-in user, I want to be able to see my tweet in the translated message and GIF chosen before tweeting.

- Once the user clicks the button to get a tweet, the user will see a box that has their tweet in their specified language and below that a GIF from GIPHY that corresponds to their message.
- If the user is satisfied with the output, they will click on a button that says "Post Tweet", which will produce a pop up indicating that the post was posted correctly or an error pop up indicating that the post was not posted correctly.
- If the user is not satisfied with the output, they will click on a button that says "Go Back" which will redirect them to the main page.
